

Legs having ND after healing a DFU have lower annual risk of ulceration(2.3% @ 5 yr) than reported in literature(25-32%)

75 legs with prior DFU in 65 patients.

If only one leg is operated the contralateral leg has a 5.5 X relative risk of ulceration, p = 0.046

1.6% Prospective recurrence risk in 42 unilateral ND
Non-op leg has ulceration relative risk RR = 5.5
